

Client Feedback

Thank you for acting as client for this Research and Development Project. Now that the project is nearing completion we would like some feedback that will assist the team or students in their future development. It is important that we gain feedback about the aspects of the work that were done well and suggestions for improvement. Please comment on the team as a whole and, where it is possible, on the individual students.

This feedback will be used by the assessors to complete a picture of the student's performance during the project, and by the students to reflect on their performance during the project and in assessing their future development needs.

Please email the completed feedback to the project mentor.

Name of Client and Organisation: Dr. Raymond Lutui, Auckland University of Technology

Name of Student/s:

Thomas Robinson
Nathan Quai Hoi
Win Phyoo
Zafar Azad
Larissa Goh
Charmi Patel
Kylie Afafe

The Project:

Could you please comment on the results of the project? To what extent did the student/s achieve the agreed outcomes?

The project fully met the agreed outcomes. The resulting system is a full implementation of the design, updated during the project period based on ongoing progress reports and discussions.

How well did they go about completing this work?

Very well – they managed the project very well, including regular meetings and progress updates back to the client. The final project report showed that each team member had worked in depth on different areas of the project.

What suggestions do you have for improvement?

Things seem to work out well for this team, but I have one advice, take time in the beginning of any project to sort the tools, what works and what will not work. This will help save time for data collection and analysis phase.

How did the student/s contribute added value or provide professional expertise to your organisation?

Network performance is always an issue in any type of networking environments. The outcome of the project will help inform the optimisation of network design, implementation, and even the delivery/updating of teaching materials.

In what ways did the student/s show initiative in learning about the wider aspects of IT professional practice?

The students were presented with the core theories and ideas at the beginning. They did their own research and showed me the design and methods for implementations of a test environment for data collections.

People Skills:

In what ways did the student/s adapt to the situation and develop and maintain professional working relationships appropriate to your organisation?

After the initial discussion, the students stayed connected with regular meetings where they presented their progress and took my feedback and suggestions for further development and improvements.

In what ways did the student/s resolve conflicts and manage and deliver to the sponsor's expectations?

There was no sign of conflicts during this project, and all communications were informative and professional.

Overall Skills:

How did the students' skills and abilities develop during the project?

It's a bit hard to judge as the project outcome and the student's work were of a high standard throughout the project.

What advice would you offer this team or each of these students for their professional development?

Carry on as you were! I have full confidence that each student will be a valued professional in their early careers.
