

Meetings/Logbook total 250 hours

13/03/25 1H: Meeting the group and sorting out strengths and weaknesses of the group, introduction etc

17/03/25 1H: Discussions of proposal document and filling in extra details to add to the document and arranging client meeting the Thursday of this week. Discussion of agenda and questions to be asked during client meetings were discussed.

18/03/25 1H : Full team meeting allocation of who is responsible for what documents to manage, arrange an agenda meeting, discussion of upskilling tools to be used and identifying areas of confusion.

19/03/25 2H: In charge of the meeting agenda document, summarizing all of the meeting discussions to be discussed in the kick off meeting with client and supervisor, added entries in the issue log and assisted team on other documents

20/03/25 2H: Client and supervisor meeting, the kick off meeting which covers project requirements, goals, process etc, group members meeting was held afterwards to discuss project scope, task delegations, time frames and methodologies.

20/03/25 3H: Work on the delegations began, research and write up on project methodology was my main task with the help of Thomas being the 2nd appointed to the task. Im also co helping on risk register and issue register along with input on the WBS.

22/03/25 2H: Carried on work for the methodology, review of issue and risk register added a few data entries to it

24/03/25 3H: Filling out the table comparing the project methodologies and explaining why we have gone with our chosen project methodology.

27/03/25 6H: Offsite hours were dedicated to getting most of the proposal done, polishing up the methodology comparisons, logging entries into the issue log and double checking the risk register and team meeting was held today

29/03/25 3H: Discussions of reworking the management methodology to better suit our project, sections had to be rewritten and modified the project phases.

30/03/25 3H: Supervisor comments came in for the proposal, making adjustments in relation to his comments

31/03/25 3H: Working on the proposal to get it completed for the mock presentation, team meeting held to go cover the remaining tasks on the document and presentation

02/04/25 3H: Continued work on the proposal with adding final touches to the presentation in preparation for tomorrow

03/04/25 6H: Final preps for presentation and group meeting prior to presenting, comments provided by supervisor on changes needed to be made to document structure, methodology change etc

06/04/25 3H: Assisting group members in getting the proposal document ready for upload, final changes, edits, refinement and grammar checks

08/04/25 3H: Group meeting to prepare for proposal presentation happening this Thursday, delegated with sections the group is speaking for and running through a draft mock for fitting the criteria of 10 min mark

09/04/25 3H: Presentation practice, refining my script for the sections I am covering, these include success criteria and project methodology

10/04/25 7H: Final preparation for presentation, including the presentation itself, following the presentation the team had we set up the sender and receiver PC which earlier in the week Ramon had given us access to all 4 PC's

12/04/25 2H: Upskilling phases commences, created a high level overview of the tools required to learn specifically bash scripting and how to use I-perf

14/04/25 4H: Creating a H-L overview of the upskilling phase, making a list overview of topics to be learnt and gone over

15/04/25 2H: Presentation with bobby, lots of feedback for proposal

16/04/25 2H: Bash scripting upskilling, looking at the fundamentals of how it works and creating the first set of scripts to learn

18/04/25 6H: Understanding linux networking and routing basics, enabling IP forwarding for both IPV4 and 6 and setting up network interfaces, have installed linux on my computer to do the learning

20/04/25 3H: TCP and UDP protocol dissection and understanding its use and application plus how I-perf utilises it. Understanding the tags and headers that belong to each IPV4 and IPV6

21/04/25 2H: Advancing on scripting practice, looking at for loops and how its incorporated with Ditg

22/04/25 4H: Studying the flags associated with Ditg, looking at what flags can concatenate log data

24/04/25 6H: Setting up Ubuntu OS on personal laptop and experimenting with Pop OS as its based on the Ubuntu distro

27/04/25 3H: Experimentations sending data between Vm's set up on 2 computers and Ubuntu set up on personal computer

29/04/25 2H: Informal meeting with the team, discussed progress with the upskilling plan and a restructure of the groups performing the ipv4 and v6 team experiments

30/04/25 1H: Created a set up document that contains all necessary commands to get sender and receiver upto speed

01/05/25 6H: Client and supervisor meeting today, got upto speed with them and discussed the plan going forward with the testing. Spent the rest of the hours setting up the receiver unit as needed to use USB to merge packages into the system

03/05/25 3H: Carried on filling out document that entailed all the commands for sender and receiver and learning some bash script techniques that work with diGT.

04/05/25 3H: Main focus of today was learning how the outputs work for Didgt and discussing with group how much data we need omitted by the tools

06/05/25 3H: Made a bash scripting syntax document to aid in building the final scripts

09/05/25 3H: Experimenting with data logs, getting mean data and figuring out how to plot the data with other team members

11/05/25 3H: Plotting the data over graphs merging with team members metrics

13/05/25 3H: Debug of data logs as they are inconsistent and trying to figure out whats causing the issue

15/05/25 4H: Compiling 10 test runs together still showed inconsistent data looking into firewalls and assisting the team in general for IPV4 testing

17/05/25 4H: Ipv6 up-skill, analysing ipv4 data with team and deciding reruns on outlier data

18/05/25 4H: Finishing up Ipv6 guide for Digt, breaking down how to calculate confidence interval and certain flags used by Digt to acquire standard deviation

20/05/25 3H: Experimented with Octave to try and compare data graphed on excel sheets vs this software, proved to be the same, had concerns raised about some data falling outside of the confidence interval

22/05/25 6H: Client meeting today discussed with Raymond changes to the test scripts, specifically increasing packet rate to allow for more accurate data, allocated roles to the group and began work on the mid term review

23/05/25 2H: Experimentation with different packet rates to analyse the omitted graphs to follow a more liner drop off as the packet size increases

25/05/25 4H: Graphing of packet rates from 50,000 to 5,000,000

27/05/25 4H: Work on the midterm review, writing up client/supervisor meeting summary, acquired skills summary

28/05/25 2H: Team meeting delegating the next set of tasks to all team members and getting absent members up to speed

01/06/25 4H: Carrying on work from newly allocated task for the mid term review, updating milestones, checking tables summarising ipv4 testing

03/06/25 3H: Carried on work for milestones and moving tables around in the mid term review report

05/06/25 4H: Short meeting with client and supervisor to get approval for fixed packet rate for all tests, ran the packet rates on the same day and verified with client after the meeting is well

08/06/25 4H: Decoded logs for ipv6 on Ubuntu, assessed results to be suffice will begin planning for next OS shortly, however still clean up with mid term review

10/06/25 3H: Final preps for upload of Mid term review

13/06/25 3H: Mid term review has been pushed to next week gave team increased time to review documents and move evidence into appropriate folder, moving upskilling documents to main folder

SEMESTER 2

7/07/25 6H : Back from break spent the day installing fedora and additional packages, ran into issues with corrupted iso file, and corrupted usb, had issues with rpm files had to pull packages online

31/07/25 3H: Client and supervisor meeting overview of the timeline ahead and carry on with debug fixes to the netplan errors found on R1

01/08/25 3H: Have began the personal report as indicated by supervisor due to lot of aspects being required in it

04/08/25 3H: Sorting out the table of contents headers and first pages of information for the personal report, organizing the tables of information

06/08/25 3H: Writing out sections of the introduction that covers across 2-3 pages

12/08/25 3H: Upskilling on kali phase of testing, looking at the set up for kali without a GUI to keep uniform testing across all 3 os's as there were no GUI in prior testings

15/08/25 3H: Furthur upskilling on kali, looking at items such as netplan use on the OS, documentation on kali set up

17/08/25 2H: Project evaluation section, adding info on the plan, goals etc

20/08/25 3H: Ran testing on VM's for kali to test the set up, machines were able to ping each other

22/08/25 2H: Adding small sections to relevant theory practices to personal report

24/08/25 2H: Adding additional sections to the theory practices in relation to the project

26/08/25 3H: Kali set up, loaded onto the two routers, nouveau driver deactivated, applying network configuration

28/08/25 5H: Set up the scripts for kali, testest ping connection between devises and began the first set of runs, attended the workshop for prepping final portfolios

01/09/25 3H: Added more section to the self report linking actual outcomes to the expected goals based on the proposal

04/09/25 5H: Meeting + Furthur runs done for kali, extracting the log files and capturing them to usb, attended workshop for writing reflective reports

07/09/25 2H: Self report added sections on evaluation of project to organization, specifically our client

25/09/25 2H: Attending workshop for prepping poster

2 WEEK BREAK

02/10/25: 4H: Meeting with client, discussed mock up presentation, out of scope contents, stayed back at uni to add more sections to the report and attended workshop for preparing for project handover

05/10/25 2H: Began writing report section on protocol theories, discussed expected results prior to starting the project

07/10/25 3H: Reading up on ipv4 and ipv6 theory to add in reference list and aid in writing my sections to link to practice

09/10/25 4H: Discussed in group meeting the writing sections for the poster have been assigned the methodology along with the lessons learned with pair member Larissa

14/10/25 3H: Added sections to report for critique of PM methodology, methods and literature and also writing up poster section on methodology

16/10/25 3H: Wrote up lessons learnt section before mock presentation, planned practice for actual presentation

20/10/25 3H: Polishing up personal evaluation section, evaluation of team roles and identification of future learning needs

23/10/25 3H: Summary and conclusion section review of project and added section on data collection journey

26/10/25 3H: Team work and project workflow section to the summary discussed workload and learning experiences

27/10/25 2H: Conclusion section written up added extra references to the list

28/10/25 2H: Report clean up before hand in

29/10/25 2H: Final checks, rewrote some paragraphs to make it sound more clear

30/10/25 1H: Added the cover page, table of contents and abstract
